The fuselage is the main portion of the aircraft to which the wing, horizontal and vertical stabilizers are attached.

The main function of the fuselage is to provide accommodation for the passengers and crew, as well as room for baggage in the overhead bins and in the forward and aft cargo compartments.

The fuselage contains several systems and main structural components.

The fuselage is divided basically in three parts:

- Forward Fuselage
- Center Fuselage
- Rear Fuselage.
- **Forward Fuselage:** it is the anterior part of the fuselage, and basically provides accommodations for pilots to fly the aircraft.
- **Center Fuselage:** it is the part of the fuselage that provides accommodations for flight attendants and passengers.
- **Rear Fuselage:** provides continuity to the fuselage, and connects the Center Fuselage to aircraft's Tail Cone.

A fuselagem é a parte principal do avião onde a ~~ala~~ os estabilizadores, horizontal e vertical, são acoplados.

A função principal da fuselagem é fornecer acomodação aos passageiros e tripulação, assim como espaço para bagagem nos compartimentos superiores e nos compartimentos de carga dianteiros e traseiros.

A fissilegen contain varios sistemas e componentes extrinsecos principais.

A fuselagem é dividida basicamente em três partes:

- Fuselogen Plantain
- Fuselogen Control
- Fuselogen Treatise

- Fuselagem Dianteira: é a parte anterior da fuselagem, que forma basicamente a cabine, para os pilotos, comandantes e a cabine.

- Função Central: é a parte da fuselagem que fornece acomodação para os assentos de vôo e provisões.

- Fuselagem Triaxial: fuselagem contínuidade 'a fuselagem, e ligas a Fuselagem Central =
caso de Cauda do varrão.
